#### AUTO-REGRESSIVE MATRIX AND TENSOR COMPLETION FOR SPATIOTEMPORAL IMPUTATION AND PREDICTIONS.

Implementation of spatiotemporal constrained matrix and tensor factorization based algorithms for imputation and forecasting of weather data. Basically, autoregressive constraints on temporal dimensions and smoothness constraints on spatial dimensions were imposed during learning process. The results showed that imposing constraints separately on the temporal and spatial dimensions of spatiotemporal weather data has significantly improved the forecasting and imputation performance.

#### TENSORIZING DYNAMIC MODEL DECOMPOSITION

Tensor train decomposition enabled fast, efficient and stable implementation of dynamic mode decomposition in the tensor framework. This work was successfully completed under the supervision of Dr. Ivan Oseledets.

#### COMPARING INTEGER AND FRACTIONAL ORDER NN FOR TREE-SPECIES CLASSIFICATION

The main idea was to implement fractional-order back-propagation algorithms and compare that with integer-based neural networks for multi-spectral image classification.

#### SHAPING FILTER RESPONSE WITH FRACTIONAL ORDER MODELS

We have employed fractional-order differential and integral operators to design frequency domain filters. The results showed that this technique is significantly better, offers greater simultaneous control over time and frequency responses, and is basically a generalization of integer-order filters.

#### **IMAGE SEGMENTATION WITH TOPOLOGICAL PRIORS**

#### DE NOVO DRUG DESIGN WITH CONDITIONAL 1DCNN VARIATIONAL AUTOENCODERS

#### **ENERGY-BASED MODELING OF DC-DC POWER CONVERTERS**

Undergraduate thesis research project under the guidance of Dr. S.A Nahvi. Development of models based on the Euler-Lagrangian framework, due to ease of energy-based (scalar) modeling rather than force-based (vector) based, was awarded an excellent mark.

#### STATE-SPACE MODELING OF POWER CONVERTERS

The basic idea was to develop and simulate the state-space mathematical models of Power electronics converters so that we can create new ones and improve the performance of existing converters.
